

ABSTRACT

This invention relates generally to compounds and processes for synthesizing derivatives of 2-3-Q-isopropylidene- α -L-xylo-2-hexulofuranosonic acid. The
5 compounds of this invention are useful, inter-alia, for the inhibition and prevention of cell adhesion and cell adhesion-mediated pathologies, including inflammatory and autoimmune diseases, such as bronchial asthma, rheumatoid arthritis, type I diabetes, multiple sclerosis, allograft rejection and psoriasis. This invention also relates to pharmacological compositions
10 containing derivatives of 2-3-Q-isopropylidene- α -L-xylo-2-hexulofuranosonic acid and the methods of treating such pathologies as listed above.
